

A. Dislike of Threes

time limit per test: 1 second

memory limit per test: 256 megabytes

input: standard input

output: standard output

Polycarp doesn't like integers that are divisible by 333333 or end with the digit 333333 in their decimal representation. Integers that meet both conditions are disliked by Polycarp, too.

Polycarp starts to write out the positive (greater than 000000) integers which he likes: $1, 2, 4, 5, 7, 8, 10, 11, 14, 16, \dots$. Output the k -th element of this sequence (the elements are numbered from 1).

Input

The first line contains one integer t ($1 \leq t \leq 100$) — the number of test cases. Then t test cases follow.

Each test case consists of one line containing one integer k ($1 \leq k \leq 1000$).

Output

For each test case, output in a separate line one integer x — the k -th element of the sequence that was written out by Polycarp.

Example

input
<pre>10 1 2 3 4 5 6 7 8 9 1000</pre>
output
<pre>1 2 4 5 7 8 10 11 14 1666</pre>
